

Front End Engineer Remote Challenge

This challenge is to help us evaluate your problem solving and development skills. In this folder you will find a mock up provided by one of our designers as well as all the assets you will need. Additionally, we have added the color palette below. You should spend no more than 4-5 hours on this challenge.

We recommend developing the bare-minimum framework and then expand upon your solutions with the remaining time. We're going to be examining your approach so it's better to complete 50% of the challenge with your best work than to finish and submit something that does not adequately represent the work you are capable of producing. Let us know if you have any questions. Good luck!

Some tips:

Feel free to use a CSS framework or preprocessor. We use Bootstrap and SCSS.

Use FontAwesome for icons not provided in assets.

None of the links or buttons actually need to link anywhere.

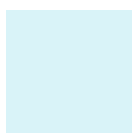

Keep browser compatibility in mind. In some cases, we have to support as far back as IE 10.

There should be some level of responsive design especially if you're using a CSS Framework.
